

**CO<sub>2</sub> MISCIBLE OPTIMIZED HYDROCARBON BLENDS AND  
METHODS OF USING CO<sub>2</sub> MISCIBLE OPTIMIZED  
HYDROCARBON BLENDS**

**ABSTRACT**

[0029] A method of treating a subterranean formation comprising the steps of providing a servicing fluid comprising carbon dioxide and a hydrocarbon blend, wherein the hydrocarbon blend comprises at least about 65% hydrocarbons having from six carbons (C<sub>6</sub>) to eleven carbons (C<sub>11</sub>); and placing the servicing fluid into the subterranean formation. A subterranean servicing fluid comprising carbon dioxide and a hydrocarbon blend wherein the hydrocarbon blend comprises and at least about 65% hydrocarbons having from six carbons (C<sub>6</sub>) to eleven carbons (C<sub>11</sub>).
